Introduction: Bridging the Skill Gap

Our project, "Skill Match," is designed to revolutionize how job seekers and employers connect. It's a smart system that analyzes resumes against job descriptions, providing a comprehensive match score and identifying crucial skill gaps.

This tool helps users understand their strengths, pinpoint areas for improvement, and receive tailored recommendations to enhance their job readiness.

The Challenge: Navigating the Job Market

Resume-Job Fit Confusion

Students often struggle to understand how well their resume aligns with specific job requirements.

Time-Consuming Manual Reviews

Recruiters spend excessive time manually reviewing countless resumes, leading to inefficiencies.

Unclear Skill Gaps

Applicants lack clear insights into their missing skills, hindering targeted self-improvement.

Lack of Quick Analysis

There's no readily available tool to quickly highlight both matched and missing skills.

Our Objectives: Empowering Job Seekers

Extract Skills

Automatically identify and extract relevant skills from resumes and job descriptions.

Compare & Score

Compare extracted skills to compute a precise resume-job match score.

Identify Gaps

Clearly highlight missing skills required for the job and extra skills possessed by the applicant.

Recommend Skills

Provide actionable recommendations for skills to acquire, improving job readiness.

Provide Clear

Insights

Present comprehensive and easy-to-understand results to users.

End-to-End Project Workflow

Our system streamlines the entire process, from input to insightful output, ensuring a comprehensive analysis for every user.

Data Processing: Resume & Job Description Parsing

Resume Parsing

Job Description Parsing

Skill Extraction and Categorization

1

Identify All Skill Types

Extract technical, non-technical (soft skills), domain-specific, and general skills.

2

Normalize Skills

Handle variations and duplicates (e.g., "JS", "JavaScript", "Node.js") to create a consistent skill list.

3

Categorize for Analysis

Group skills into categories for more granular and insightful analysis, improving relevance.

Skill Matching & Score Calculation

The Matching Process

Our core logic compares the skills extracted from the resume against those from the job description. This comparison yields three distinct categories:

- **Matched Skills:** Skills present in both the resume and job description.
- **Missing Skills:** Skills required by the job but absent from the resume.
- **Additional Skills:** Skills present in the resume but not explicitly mentioned in the job description.

Match Score Calculation

A precise percentage score is calculated, indicating the degree of alignment. This score is derived from:

- Skill overlap
- Relevance of matched skills
- Completeness of required skills

Dynamic Output Presentation

Match Score at a Glance

A clear percentage showing overall compatibility.

Skill Breakdown

Detailed lists of matched, missing, and additional skills.

Tailored Recommendations

Actionable suggestions for skill acquisition.

Improvement Roadmap

Guidance on how to enhance your resume and skill set.

The results are presented in an intuitive dashboard format, providing users with immediate and actionable insights.

Thank You !
